

# Data Cleaning & Visualization Project Report

## Objective

To demonstrate data cleaning and visualization using Python libraries such as Pandas, Matplotlib, and Seaborn.

## Tools Used

Python, Pandas, Matplotlib, Seaborn

## Steps Performed

1. Loaded the dataset.
2. Handled missing values.
3. Removed duplicate records.
4. Detected and removed outliers.
5. Created visualizations such as histogram and heatmap.

## Outcome

The dataset was cleaned successfully and prepared for analysis. Visualizations helped identify patterns and relationships in the data.
